

FINE SCREENING INSECT MESH

Fine screening insect mesh is a high quality extruded high density polyethylene mesh. The fine mesh structure offers effective protection from the smallest of insects and debris. The mesh provides excellent light transmission and allows good air flow. The fine screening mesh is rigid, so that it can be installed in panels and used as insect netting in both temporary and permanent applications

- Ideal as an Insect mesh
- Manufactured from high density polyethylene
- UV Stabilised and rot resistant
- Chemical resistant
- Available in black & green. Other colours can be manufactured to order subject to order quantity
